

advenco Consulting GmbH is a full-service manufacturing IT provider, delivering high performance IT solutions to manufacturing companies.

The core competencies include production management (MOM, MES), production scheduling (APS) and data analysis and evaluation (EMI). A special focus is set on business processes that cannot be captured automatically. advenco provides mobile solutions to integrate manual processes in the overall manufacturing IT infrastructure

advenco is located in Giessen, Germany, operating in many countries around the world

- **Business critical information available whenever and wherever**
- **Easy and quick navigation in personalized environment**
- **Reliable realtime data directly from the plant without delays**
- **Fast overview about production bottlenecks**

## Mobile manufacturing intelligence on iPhone

key2value allows the user to view relevant production performance measures on iPhone, iPad or iPod touch. With this performance information the production manager will be able to act on possible disturbances or bottlenecks within the manufacturing facilities in realtime.

To gain an overview of the most important information at a single glance, the user can design and save his own dashboards workspaces directly on the iPhone, choosing realtime data from the manufacturing intelligence server on site.

key2value allows access to realtime data on standard OPC-DA and OPC HDA servers or by selecting the information via SQL statements directly from relational databases.

The native iPhone App shows key performance indicators (KPI) in different representations, such as gauge, charts, alarm light and table view on the iPhone.

In realtime!

A direct connection to Rockwell Automation's manufacturing intelligence system FactoryTalk VantagePoint EMI allows direct browsing of the VantagePoint Unified Production Model tree on the iPhone. This provides easy access to all values configured, calculated and stored in the Rockwell EMI system **whenever and wherever.**
